One-Shot Deployment Confirmation

Post-threshold collection • 1% phishing prevalence • 14,600 unseen domains

CONFIRMATION FAILED

Accuracy	Precision	Recall	F1	ROC-AUC	PR-AUC	FPR	FNR
99.20%	61.42%	53.42%	57.14%	84.74%	49.95%	0.34%	46.58%

TN 14,405 • FP 49 • FN 68 • TP 78

False alerts per 10,000 visits: 33.6 • detected phishing per 10,000: 53.4

The predeclared gate failed on untouched confirmation. The system must not be presented as confirmed for deployment, and this cohort must not be used for further tuning.

No threshold, feature, checkpoint, or data-selection rule was changed after inference.

Uncertainty and Deployment Meaning

Recall	**53.42%**	95% CI 45.35%–61.32%
False-positive rate	**0.34%**	95% CI 0.26%–0.45%
Precision	**61.42%**	95% CI 52.73%–69.43%
Accuracy	**99.20%**	95% CI 99.04%–99.33%

Interpretation boundary

Passing supports an offline deployment candidate under this root-heavy, proxy-labelled cohort. It does not prove production readiness; latency, live browser integration, privacy, adversarial resistance, and ongoing drift monitoring remain required.

Because only 146 phishing domains were available after strict overlap removal, recall uncertainty is wider than the FPR uncertainty estimated from 14,454 legitimate domains.
