Browser Extension v0.5.2 Evaluation

Exact packaged ONNX ensemble • fixed threshold 0.9880644679

Dataset	Accuracy	Precision	Recall	F1	ROC-AUC	PR-AUC	FPR	FNR	TN/FP/FN/TP
Frozen final 6K (5% phishing)	98.23%	84.15%	79.67%	81.85%	95.52%	87.18%	0.79%	20.33%	5655/45/61/239
Post-freeze 10K (3% phishing)	98.80%	78.48%	82.67%	80.52%	96.61%	87.10%	0.70%	17.33%	9632/68/52/248

Final 6K: 239 of 300 phishing URLs detected; 45 of 5,700 legitimate URLs warned.

Later 10K: 248 of 300 phishing URLs detected; 68 of 9,700 legitimate URLs warned.

Interpretation: v0.5.2 improves sensitivity relative to v0.5.1 by moving the warning boundary. It does not change model ranking or ROC-AUC, and it trades additional warnings for fewer missed phishing URLs.

These are frozen proxy-labelled external cohorts, not a production certification. Tranco URLs are legitimate proxies and PhishTank rows were verified in their recorded source snapshots.
